102																																					
103	ARS - Antigen Recognition Site																																				
104	Reference - Human Immunology 68, 392-417 (2007)																																				
105	@American Society for Histocompatibility and Immunogenetics, 2007																																				
106	Note:																																				
107	Alleles bearing suffix 'G' in A,B,C locus has identical sequences in exon 2 and exon 3 antigen recognition sites.																																				
108																																					
109	Alleles bearing suffix 'G' in DRB1,DRB3,DRB4,DRB5,DQB1,DQA1,DPB1,DPA1 locus has identical sequences in exon 2 antigen recognition sites.																																				
110																																					
111	Please find below the list of alleles included for each allele suffix with 'G'.																																				
112	Allele Database Version used in the report is 3.43.0(Jan 2021)																																				
113	Sequencing Technology : Illumina Sequencing																																				
114	NMDP code is reported if G code is not available after analyzing non-ARS exons																																				
115																																					
116																																					
117
