102																																						
103	ARS - Antigen Recognition Site																																					
104	Reference - Human Immunology 68, 392-417 (2007)																																					
105	@American Society for Histocompatibility and Immunogenetics, 2007																																					
106	Note :																																					
107	Alleles bearing suffix 'G' in A,B,C locus has identical sequences in exon 2 and exon 3 antigen recognition sites.																																					
108																																						
109	Alleles bearing suffix 'G' in DRB1,DRB3,DRB4,DRB5,DQB1,DQA1,DPB1,DPA1 locus has identical sequences in exon 2 antigen recognition sites.																																					
110																																						
111	Please find below the list of alleles included for each allele suffix with 'G'.																																					
112	Allele Database Version used in the report is 3.43.0(Jan 2021)																																					
113	Sequencing Technology : Illumina Sequencing																																					
114	NMDP code is reported if G code is not available after analyzing non-ARS exons																																					
115																																						
116																																						
117
